Art Unit: 3632

This is the non-final Office Action for the serial number 10/580,612, ADJUSTABLE SUPPORT MECHANISM, filed on 3/27/07.

The allowability of claims 1-2 and 5-19 have been considered and withdrawn in view of new ground rejection, any inconvenience is regretted.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-2 and 16-17 are rejected under 35 U.S.C. 102(e) as being anticipated by US Patent # 7,567,436 to Jeong.

Jeong teaches an adjustable support mechanism comprising a first bracket (90), a second bracket (50), a connecting member (100) pivotally coupled to the first bracket at a first position and pivotally coupled to the second bracket at a second position spaced from the first position and a linking member (175) coupled to the connecting member so as to be movable transversely in relation to the connection member. The linking member is arranged to engage the first bracket and the second bracket such that pivotal movement of the first bracket in a first rotational direction is related to transverse movement of the linking member which is in turn related to pivotal movement of the second bracket also in the first rotational direction (column 15, lines 1-

14). The mechanism includes biasing means (170 and 67) for biasing the linking member. The mechanism further comprises a locking mechanism (104).

Allowable Subject Matter

Art Unit: 3632

Claims 5-15 and 18-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 21 is allowed.

Response to Arguments

Applicant's arguments with respect to claims 1-2 and 5-19 have been considered but are moot in view of the new ground(s) of rejection.
